All colors will change on exterior exposure, some more than others, and the surface develop a natural weathered appearance. After 12 months of direct weathering at South Florida Test Service, Inc., white, pastels and the Vari-Tone® Series are the most color-fast. *Color more likely to change on exterior exposure.

Light Reflectance (LR) values determined by ACS tristimulus method. Proper design and construction are necessary for total performance of Spectra-Glaze® block walls. All colors are susceptible to damage if wall failure occurs. The cost of different colors may vary. Contact your local representative for current pricing. ™Trademarked Brands of The Burns & Russell Company.
